

# Join our Field Work !

Call for students

We are 3 French students in agronomy, conducting a field study in Bosnia, focusing on two regions: **Travnik** and **Mostar** and their agricultural systems.

## What will we do?

Our approach is based on the *Agrarian Diagnosis* method :

Task	When
Understanding landscapes and their historical evolution	April / may
Identifying different types of farms (based on farming practices)	June
Conducting farm surveys on technical and economic aspects	June to August
Writing a final report on the agricultural systems	September

## How can you help us in the field?

As we do not speak Bosnian, your help will be essential to:

- Translate during interviews with farmers
- Support communication in the field

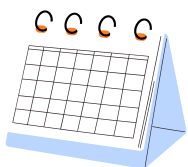

You will also:

- Travel with us across the region
- Meet local farmers and discover agricultural practices
- Share time together and enjoy activities outside of work

## When

The most relevant period to join us is during the summer, when we will focus on field surveys (technical and economic data collection). You can join us after your faculty obligations, depending on your availability.

We will present the project more precisely at the University of Sarajevo on the 16<sup>th</sup> of April, at 12pm

Interested? See you on Thursday !
